

Developing APIs with Google Cloud's Apigee API platform (T-APIENG-B)

ID GO-T-APIENG-B Price on request Duration 3 days

Course Overview

In this course, you learn how to design APIs, and how to use OpenAPI specifications to document them. You learn about the API life cycle, and how the Apigee API platform helps you manage all aspects of the life cycle. You learn how APIs can be designed using API proxies, and how APIs are packaged as API products to be used by app developers. Through a combination of lectures, hands-on labs, and supplemental materials, you will learn how to design, build, secure, deploy, and manage API solutions using Google Cloud's Apigee API Platform.

Who should attend

Developers, architects, or engineers responsible for the solutioning, design, implementation, or management of APIs, API products, or digital products that leverage APIs.

Prerequisites

Familiarity with HTTP, XML, JSON, and JavaScript.

Module 03: API Proxies

- Define the building blocks of APIs and API proxies.
- Describe how APIs proxies work and how capabilities such as flows, policies, route rules, virtual hosts and target servers play a role.
- Describe how APIs are exposed.
- Understand how API proxies connect to backend systems.
- Generate an API proxy using an OpenAPI specification.
- Run an API proxy in different environments without changing the target URL in the proxy code.
- Route target endpoints using route rules and troubleshoot proxies using the Apigee debug tool.

Module 04: API Products

- Define API products and API product strategies.
- Describe the role of developers, applications, and API keys in API management.
- Describe the API publication process.
- Describe API responses and status codes for REST APIs.

- Publish APIs as products.
